                                                                                                                                                                                                                                                                                                                                                                                                        CC cancer-associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis cample, N and P may be used to treat disorders associated with diappropriate P expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome complete the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps, by inserting the nucleic acids conto a host cell and culturing the cell to express the proteins. N and P carcinomas and cancers. AAH37196 to AAH37204 and AAB77789 represent CC can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204 and AAB77789 represent CC sequences used in the exemplification of the present invention. N.B. CP agges 666 to 682 and page 7053 of the sequence listing were missing at time of publication, meaning no sequences are present for SEQ ID NO:1027
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Nucleic acids encoding useful for preventing,

                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to the isolation of genes encoding 9 human apoptosis-related proteins. The nucleotide sequences AAA95790-A95798 encode the human apoptosis related proteins eaquences AAA95790-A95798 encode the human apoptosis related proteins by linking to the gene for the human immunoglobulin G FC (IgG FC) portion (AAA95799) for increasing the stability of the fusion protein as compared to the human protein only. The gene and encoded protein may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate apoptosis associated protein expression, e.g. cancer (e.g. colon, breast and prostate cancer, melanomas and lymphomas), inflammation, autoimmune disorders (e.g. concer (e.g. colon, breast and prostate cancer (e.g. colon, breast and prostate cancer).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cc ankylosing spondylitis, amyloidosis, allergies, anemia, osteoporosis, cc autoimmune hemolytic anemia, asthma, autoimmune thyroiditis, Crohn's cdisease, contact dermatitis, diabetes mellitus, gout, Graves' disease, cc glomerulonephritis, rheumatoid arthritis, scleroderma, systemic lupus cc erythematosus, systemic sclerosis, ulcerative colitis, haemodialysis, cuveitis; viral, bacterial, fungal, parasitic, protozoal, helminthic cinfections and trauma. Reproductive disorders include disorders of prolactin production, infertility, endometriosis, polycystic ovary c syndrome, ectopic pregnancies, galactorrhea, abnormal sperm physiology, c disruptions of spermatogenesis, cancer of testis and prostate, impotence, carcinoma of male breast and gynecomastia. The APRG polynucleotides are useful for creating knockin humanized animals or transgenic animals to model human disease and to detect and quantify gene expression in compsied tissues in which expression of APRG is correlated with disease. APRG, fragments of it and antibodies specific for APRG are useful as celements on a microarray which is useful to monitor or measure protein-c protein interactions, drug-target interactions and gene expression correlates.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  polynucleotides. The APRG polypeptides, polynucleotides and modulators are useful for diagnosis, treatment and prevention of cell proliferative, immunological and reproductive disorders. The cell proliferative disorders include cancers, actinic kerattosis, arteriosclerosis, atherosclerosis, bursitis, cirrhosis, hepatitis, psoriasis, and immunological disorders include acquired immunodeficiency syndrome (AIDS), adult respiratory distress syndrome, Addison's disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 326
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            100
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            361

Also described: (1) primer and probe for investigation of the DEDD2 gene; and (2) reagents for gene therapy. DEDD2 has cytostatic activity. DEDD2 can be used in the diagnosis and treatment of cancers of the kidney, large intestine and prostate, and acute and chronic myeloid leukaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        human; death effector domains containing DNA-binding protein; DED-containing DNA-binding protein; DEDD2; cell death; gene t cytostatic; cancer; chronic myeloid leukaemia.

                                                                                                                                                             CC is useful for identifying a binding agent, preferably a protein or a drug commain from DAP3, IRAK4, CTDD (Chlamydia trachomatis DD protein or a drug commain from DAP3, IRAK4, CTDD (Chlamydia trachomatis DD protein), DED4 or CC domain from DAP3, IRAK4, CTDD (Chlamydia trachomatis DD protein), DED4 or CC (CNIDD (NGFR-interacting Death Domain), with a candidate binding agent and detecting the association of the domain and the candidate binding agent (CC by yeast two hybrid assay, immunoprecipitation, SPA, ultraviolet (UV) or CC chemical crosslinking, nuclear magnetic resonance (NMR), mass CC spectroscopy (MS) and FPA. The invention is useful for modulating the level of a cell process such as cell proliferation, cell adhesion, cell stress responses, responses to microbial infection and B cell communoglobulin class switching, in particular apoptosis within a cell communoglobulin class switching, in particular apoptosis within a cell.

CC Antibody specifically reactive with CTDD DD of C. trachomatis , C. CC muridarum, C. pneumoniae, and C. psittaci or a nucleic acid encoding the CTDD DD protein is useful for modulating the activity of oncogenic proteins, the creating bacterial infections by modulating the activity of bacterial components of the protein and antibody specific for it are useful for creating a pathology caused by the oncogenic proteins and for creating a pathology is infection, inflammation, allergy.

CC sepsis, autoimmunity, allograft rejection and other diseases. The protein cell division, inflammatory diseases such as sepsis, fibrosis, inflammatory diseases such as sepsis, fibrosis, contends and gene therapy. The present sequence is human DED4 protein
                                                                                                                     Alignment Scores:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New polypeptide comprising a death domain or death effector domain, useful for discovery of drugs that suppress infection, inflammation, allergy, sepsis, autoimmunity, allograft rejection and other diseases.
                                                                                                                                                             Sequence 318
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an isolated polypeptide comprising domain (DD), death effector domain (DED) or NB-ARC domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 3; Page 186-187; 209pp; English.

                                                                                                                                                                                                                                                                                                                                                  The present invention provides novel death Domain (DD) and death effector cc domain (DED) proteins and nucleic acids encoding them. The invention also composed to the containing protein such as Chlamydia trachomatis cc death domain containing protein (CTDD) DD and neural growth factor creeptor-interacting death domain (NIDD) DD. The invention is useful for clidentifying a binding agent (e.g. protein or drug) that binds a DD, DED cr NaARC domain from DAP3, IRAK4, CTDD, DED or NB-ARC domain and identifying an effective agent (e.g. protein or drug) that binds the DD, DED or NB-ARC domain. The invention is also useful for cthat binds the DD, DED or NB-ARC domain. The invention is also useful for cell proliferation, cell stress responses, responses to microbial cell proliferation and B cell immunoglobulin class such as apoptosis, cell adhesion, cell proliferation, allergy, allograft rejection, sepsis and NB-ARC domain antibodies are useful for discovery of drugs that suppress infection, autoimmunity, inflammation, allograft rejection, sepsis, keratinocyte autoimmunity, inflammation, allograft rejection, sepsis, keratinocyte (following balloon angioplasia, keloid, benign prostatic hypertrophy, fibrosis, cell antibody therapy and gene therapy. The present sequence is human DED4 or or or DED4 gene is located on chromosome 19
                                                                                                                                                                               US-10-030-271-3 (1-1883)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New polypeptide comprising a death domain or death effector domain, useful for discovery of drugs that suppress infection, inflammation, allergy, sepsis, autoimmunity, allograft rejection and other diseases.
                                                                                                                                                                                                                                                                                                                             Sequence 318
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim

CC Polynucleotide sequences AAF17982 - AAF18424 encode human lung cancer CC associated proteins represented in AAB58106 - AAB58548. Lung cancer CC associated proteins and polynucleotide sequences, their agonists, and ansociated proteins and polynucleotide sequences; their agonists, and CC antagoniats may have neuroprotective; cytostatic; cardioactive; CC immunomodulatory; muscular active general; vulnerary; gastrointestinal CC general; nephrotropic; antiinfective; gynecological; or antibacterial CC activity. The invention also includes antibodies specific for the protein CC or polynucleotide sequences. The lung cancer associated polynucleotide sequences may be used for detection of lung cancer, chromosome CC identification, as chromosome markers, and for numerous other diagnostic CC or research purposes. The proteins may be used to treat disorders such as neural, inmune, muscular, reproductive, gastrointestinal, pulmonary, CC cardiovascular, renal, and proliferative disorders. The proteins may also CC used in the treatment of wounds and infectious diseases.

CC polynucleotide sequences AAF18425 - AAF18433 and peptide AAB58549 are CC used in the course of the invention for the identification and CC characterisation of the polynucleotide and protein sequences
Sequence 319 AA;

                                                                                 The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAMA8642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, cancer diagnosis and inflammation, leukaemias and c.N.S disorders. Note: The sequence data for this patent did not form
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; nootropic; immunosuppressant; cytostatic; gene therapy; cance; peripheral nervous system; neuropathy; central nervous system; CNS; Alzheimer's; Parkinson's disease; Huntington's disease; haemostatic; amyotrophic lateral sclerosis; Shy-Drager Syndrome; chemotactic; chemokinetic; thrombolytic; drug screening; arthritis; inflammation;

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome Other uses include the utilisation of the activity, chemotactic/chemokinstic activity, haemostatic activity, haemostatic
Sequence
                                                    and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders. Note: The sequence data for this patent did not form part of the printed specification

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an isolated polypeptide comprising a death CC domain (DD), death effector domain (DD) or NB-ARC domain. The invention CC is useful for identifying a binding agent, preferably a protein or a drug CC that binds a DD, DED or NB-ARC domain, by contacting a DD, DED or NB-ARC domain, by contacting a DD, DED or NB-ARC domain, by contacting a DD, DED or NB-ARC domain, by contacting a DD, DED or NB-ARC domain, by contacting a DD, DED or NB-ARC domain and the candidate binding agent and CC detecting the association of the domain and the candidate binding agent, the contacting applead or CC contacting a DD, DED or NB-ARC CONTACTING AND PROTEIN, DED4 or CC contacting a DD, DED4 or CC contacting a Cell process such as cell proliferation, SPA, ultraviolet (UV) or CC contacting a Cell process such as cell proliferation, cell adhesion, cell contacting a Cell process, responses to microbial infection and B cell contacting a Cell process within a cell. CC antibody specifically reactive with CTDD DD of C. trackmatis , C. CC contacting a pathology caused by the activity of oncogenic proteins, the CC contacting a pathology caused by the activity of oncogenic proteins, contacting bacterial infections by modulating the activity of bacterial contents. The protein and antibody specific for it are useful for contacting immune-based pathologies, pathologies associated contactive, allograft rejection and other diseases. The protein contaction, inflammatory diseases such as sepsis, fibrosis, contacting are therapy. The protein sort disease infection is used in antisense contaction and contactive and antisense contaction and contactive and antisense contaction and contactive and contactive and contactive and contactive and contactive and contactive and contactive and contactive and contactive and contactive and contactive and contactive and contactive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                US-10-030-271-3 (1-1883)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Percent Similarity:

                                                                                                                                                                                                                                                                            Ξ
```

The present invention provides novel death Domain (DD) and death effector domain (DED) proteins and nucleic acids encoding them. The invention also CC provides death domain containing protein such as Chlamydia trachomatis CC death domain containing protein such as Chlamydia trachomatis CC death domain containing protein such as Chlamydia trachomatis CC death domain containing protein such as Chlamydia trachomatis CC identifying a binding agent (e.g. protein or drug) that binds a DD, DED CC or NB-ARC domain from DAP3, IRAK4, CTDD, DED or NB-ARC domain with protein CC that modulates the association of a DD, DED or NB-ARC domain with protein CC that binds the DD, DED or NB-ARC domain. The invention is also useful for CC modulating the level of cell process such as apoptosis, cell adhesion, CC cell proliferation, cell stress responses, responses to microbial CC infection and B cell immunoglobulin class swithing. DDs, DEDs and NB-ARC domains and/or anti-DD, anti-DED or anti-NB-ARC domain antibodies are useful for discovery of drugs that suppress infection, autoimmunity, CC inflammation, allergy, allograft rejection, sepsis and other diseases. CC hyperplasia, heloid, benign prostatic hypertrophy, fibrosis, CC inflammatory hyperplasia, keloid, benign prostatic hypertrophy, fibrosis, CC inflammatory hyperplasia, keloid, benign prostatic hypertrophy, fibrosis, CC antibody therapy and gene therapy. The present sequence is human DED4 DED crotein. The DEDD gene is located on chromosome 1

                                                                                  The invention relates to the isolation of genes encoding 9 human apoptosis-related proteins. The nucleotide sequences AAA95790-A95798 encode the human apoptosis related proteins AAB15551-B15559. This sequence represents a fragment of the protein encoded by the gene given in the descriptor line. The genes can be used to generate fusion proteins by linking to the gene for the human immunoglobulin G Fc (IGG Fc) portion (AAA95799) for increasing the stability of the fusion protein as compared to the human protein only. The gene and encoded protein may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate apoptosis associated protein expression, e.g. cancer (e.g. colon, breast and prostate cancer, melanomas and lymphomas), antoimmune disorders (e.g. multiple sclerosis) and viral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Nucleic acids encoding human apoptosis associated protein, useful for the prevention, treatment and diagnosis of e.g. Alzheimer's and Parkinson's disease, inflammation and ischemic injury.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       virucidal; anti-AIDS; vasotropic; anti-ischaemic; antiparkinsonian; anti-Alzheimer; gene therapy; human; apoptosis; fusion protein; cancer; colon; breast; prostate; melanoma; lymphoma; inflammation; herpes;

                                                                                                                                                                                                                                                                                                                                                                                                                  This is the amino acid sequence of human FLAME-2, or FADD-like apoptotic/anti-apoptotic molecule 2. FLAWE-2 is a novel anti-apoptotic protein that is similar in structure to FADD, but its C-terminal region does not have death domain homology. Its structure suggests that it could be an adaptor molecule for an as yet unidentified signalling complex. FLAME-2 interacts weakly with Mch4 and Mch5 but does not interact with FADD. It can abrogate UV-induced apoptosis and to a lesser degree inhibit Fas/TMFR-induced apoptosis in the same cell line. The FLAME-2 amino acid sequence was deduced from the nucleotide sequence of an isolated SST (see AAV74137). Host cells, recombinant vectors, and methods of using FLAME-2 to identify substrates, activators or inhibitors of FLAME-2 are provided. FLAME-1 (see AAW90107), FLAME-2 and agonists can be used to inhibit apoptosis, e.g. for treating HIV infection or Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated FADD-like anti-apoptotic molecules -apoptotic and anti-apoptotic agents for treating, Alzheimer's disease or neoplastic conditions.

FLAME-2 is a novel anti-apoptotic protein that is similar in structure to FADD, but its C-terminal region does not have death domain homology. Its structure suggests that it could be an adaptor molecule for an as yet unidentified signalling complex. FLAME-2 interacts weakly with Mch4 and Mch5 but does not interact with FADD. It can abrogate UV-induced apoptosis and to a lesser degree inhibit Fas/TNVR-induced apoptosis in the same cell line. The FLAME-2 amino acid sequence was deduced from the nucleotide sequence of an isolated EST (see AAV74138). Human FLAME-1 and FLAME-2 proteins (see AAW90107-08) are
                                                                                                                                                                                                                                                                                                                                                                                                  claimed. Host cells, recombinant vectors, and methods of using FLAME to identify substrates, activators or inhibitors of FLAME are provided. FLAME-1, FLAME-2 and agonists can be used to inhibit apoptosis, e.g. for treating HIV infection or Alzheimer's disease. Inhibitors of the polypeptides can be used as apoptotic agents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated FADD-like anti-apoptotic molecules - used to develop apoptotic and anti-apoptotic agents for treating, e.g. HIV infection, Alzheimer's disease or neoplastic conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       FLAME-2; FADD-like apoptotic/anti-apoptotic molecule; mouse; apoptosis; HIV; infection; Alzheimer's disease; cancer; therapy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC This invention describes a novel DEDD protein (I) for regulating Capoptosis which has antitumor and antiviral activity. (I) is expressed combiquitously and after induction of the CD95 apoptotic signalling pathway comigrates to the nucleus/nucleolus where it inhibits transcription of comissional DNA, and thus biosynthesis of proteins, including those with canti-apoptotic activity. (I), or the DNA (II), encoding it, is used for regulation and diagnostic detection of apoptosis, particularly in cases of disease, e.g. of the immune system (e.g. acquired immune deficiency syndrome) and tumors, also for studying apoptosis or its regulation. Antibodies (Ab) specific for (I) are used to detect/quantify (I), cor contribution of time, also for inhibition of (I). (I) is cored to raise Ab and for detection of specific autoantibodies. (II), or corresponding gene, also for inducing expression and organization of the corresponding sene, also for inducing expression of (I) in vivo or in the method of the invertion.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          regulation and diagnostic detection of apoptosis, particularly in cases of disease, e.g. of the immune system (e.g. acquired immune deficiency syndrome) and tumors, also for studying apoptosis or its regulation. Antibodies (Ab) specific for (I) are used to detect/quantify (I), particularly as a function of time, also for inhibition of (I). (I) is used to raise Ab and for detection of specific autoantibodies. (II), or derived primers, can be used to detect expression and organization of the corresponding gene, also for inducing expression of (I) in vivo or in selected tissues. This sequence represents the human DEDD protein described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention describes a novel DEDD protein (I) for regulating apoptosis which has antitumor and antiviral activity. (I) is expressed ubiquitously and after induction of the CD95 apoptotic signalling pathway migrates to the nucleus/nucleolus where it inhibits transcription of ribosomal DNA, and thus biosynthesis of proteins, including those with anti-apoptotic activity. (I), or the DNA (II), encoding it, is used for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New protein for regulating apoptosis, particularly for diagnosis treatment of e.g. tumors and acquired immune deficiency syndrome.

                                                             sequence and an oligonuclectide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide which comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH13742 represent human action sequences; and AAH13632 represent oligonucleotides, all of which are used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                          length cDNAs defined in the specification. Where a primer set comprises:
(a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides, or (b) a combination of the comprises at least 15 nucleotides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Primer sets for synthesizing polynucleotides, particularly the 5602 full-
length cDNAs defined in the specification, and for the detection and/or
diagnosis of the abnormality of the proteins encoded by the full-length

The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polymucleotides, particularly full-length CDNAs. The primers are useful for by the full-length cDNAs. The primers are useful for by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH303166 to AAH13628 and collaponucleotides, all of which are used in the exemplification of the constant of the primers and the comprises to AAH13632 represent

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to FADD-like apoptotic/anti-apoptotic proteins (FLAME 1 or 2) and nucleic acid molecules encoding such proteins. FLAME sequences are useful for inhibiting apoptosis and for gene therapy of diseases characterised by apoptosis including HIV infection and Alzheimer's disease. FLAME inhibitors are useful as apoptotic agents and activators are useful as anti-apoptotic agents. FLAME-1 is useful as a substrate for caspase in assays to identify caspase inhibitors. The present sequence is human FLAME-2 protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        gene then FLAME-2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to FADD-like apoptotic/anti-apoptotic proteins (FLAME 1 or 2) and nucleic acid molecules encoding such proteins. FLAME sequences are useful for inhibiting apoptosis and for gene therapy of diseases characterised by apoptosis including HIV infection and Alzheimer's disease. FLAME inhibitors are useful as apoptotic agents and activators are useful as anti-apoptotic agents. FLAME-1 is useful as a substrate for caspase in assays to identify caspase inhibitors. The present sequence is mouse FLAME-2 protein

                                                                                                                                                                                                                                                                                                                                                     in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as localised system suppression, activity, hemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and assays for receptor activity, arthritis and inflammation, leukaemias and

                                                                                                  CC rine invention relates to an isolated polynucleotide (ACF-64435-ACF-64735) CC encoding a Propionibacterium acres protein. The invention also relates to CC immunogenic fragments of P. acres polypeptides. The inventional CC additionally encompasses expression vectors and host cells comprising a CC polynucleotide of the invention; antibodies against polypeptides of the invention; fusion proteins comprising a polypeptide of the invention; a comprising a polypeptide of the invention; a comprising a polypeptide of the invention; a comprising a polypeptide of the invention; a comprising an immune response specific for a P. acres comprising that this method; a vaccine composition (comprising P. acres polypeptides, or complete the composition (comprising P. acres polypeptides, or complete the composition (comprising P. acres polypeptides, or complete the composition (comprising P. acres in a complete the composition (comprising P. acres in a complete the polypeptide); a method and kit for detecting or determining the presence or absence of P. acres in a complete the parties, and a method for inhibiting the development of P. acres in a complete the parties, and a method for inhibiting the development of P. acres in a complete the parties are useful for diagnosing, preventing cells that express the polypeptides are useful for diagnosing, preventing or treating acres completed and the kit is useful for performing an immune response specific for a P. acres complete composition is useful for the composition of the present composition is useful for the composition proteins of the present of the present of proteins acres polypeptide predicted to be encoded by an ORF (open credding frame) contained within the P. acres polymented form part of the printed specification, but was obtained in electronic format directly contained within the P. acres polymented for mat did not form part of the proteins of the composition is contained within the P. acres polymented for mat directly form part of the contained within the present conta

                                                                                                                                                                                                                                                                                                                                              Alignment Scores:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins or useful in genetic vaccination, testing and therapy, and can be used as nutritional supplements. They may be used to increase stem cell proliferation; to regulate hasematopoiesis; and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; immune suppression and/or anticion, as anti-inflammatory agents; and in treatment of leukaemias.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Nucleic

                                                                            Pred.
                                                                                             Alignment Scores
                                                                                                                                                    presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used to diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA). Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                   polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            US-10-030-271-3 (1-1883) x AAU55376 (1-51)
                                                                                                                                                                                         Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic CC polypeptides. The proteins and their associated DNA sequences are used in CC the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (eynovitis, acne, CC P. acnes. The disorders include SAPHO syndrome (eynovitis, acne, CC P. acnes is also involved in infections of bone, joints and the central CC nervous system, however it is particularly involved in the inflammatory CC lesions associated with acne vulgaris. A method for detecting the CC presence or absence of P. acnes in a patient comprises contacting a CC sample with a binding agent that binds to the proteins of the invention CC and determining the amount of bound protein in the sample. The CC plypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to CC downregulate expression and activity of P. acnes polypeptides and CC diagnostic agents for determining P. acnes presence, for example, by CC enzyme linked immunosorbent assay (ELISA). Note: The sequence data for this patent did not form part of the printed specification, but was CC obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             21-APR-2000; 2000US-0199047P

cc additionally encompasses expression vectors and host cells comprising a coplynucleotide of the invention; antibodies against polypeptides of the invention; fusion proteins comprising a polypeptide of the invention; a comerhod for stimulating an immune response specific for a P. acnes composition (comprising T cells prepared to this method, a vaccine composition (comprising P. acnes polypeptides, or coplynucleotides, antibodies, fusion proteins, T cell populations, or cell sprepared comprisient or comprising P. acnes polypeptides, compared comprisient or comprisient or cells prepared comprisient populations, or cell sprepared comprisient proteins, T cell populations, or cell sprepared comprisient populations, or cell sprepared comprisient, and a method for inhibiting the presence or absence of P. acnes in a compared comprisient. The P. acnes polypeptides, polynucleotides, antibodies, fusion proteins, T cell populations or antigen-presenting cells that express the collections, T cell populations or antigen-presenting cells that express the collections. The polynucleotides can also be used as probes or primers for conclete acid hybridisation. The vaccine composition is useful for the conclete acid hybridisation. The vaccine composition is useful for the conclete conclete acid hybridisation and the vaccine composition is useful for the conclete acid hybridisation and the vaccine composition is useful for the conclete conclete acid hybridisation across the vaccine composition across the present conclete acid hybridisation across conclete conclete acid hybridisation across conclete conclete acid hybridisation across conclete conclete acid hybridisation across conclete conclete acid hybridisation across conclete conclete acid hybridisation. The invention relates to an isolated polynucleotide (ACF64435-ACF64733) encoding a Propionibacterium acnes protein. The invention also relates to polypeptides encoded by the polynucleotides (ABM35624-ABM64536) and to immunogenic fragments of P. acnes polypeptides. The invention and to immunogenic fragments of P. acnes polypeptides. The invention additionally encompasses expression vectors and host cells comprising a polynucleotide of the invention; antibodies against polypeptides of the invention; a method for stimulating an immune response specific for a P. acnes polypeptide and an isolated T cell population comprising T cells prepared via this method; a vaccine composition (comprising P. acnes polypeptides, antibodies, fusion proteins, T cell populations, or antigen-presenting cells that express the polypeptide); a method and kit for detecting or determining the presence of P. acnes in a patient; and a method for inhibiting the development of P. acnes in a
                                                                                                                                                                                                                                                                                                                                                                                    Mitcham C

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             patient. The P. acnes polypeptides, polynucleotides, antibodies, fusion proteins. T cell populations or antigen-presenting cells that express the polypeptides are useful for diagnosing, preventing or treating acne vulgaris, or for stimulating an immune response specific for a P. acnes protein. The polynucleotides can also be used as probes or primers for nucleic acid hybridisation. The vaccine composition is useful for the stimulation of an immune response against P. acnes, or for treating acne, and the kit is useful for performing a diagnostic assay. The present sequence represents a polypeptide predicted to be encoded by an ORF (open reading frame) contained within the P. acnes polynucleotides of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          epilepsy, stroke, Alzhelmer's queess, randing, disease, parkinson's disease and multiple sclerosis), disease, parkinson's disease and multiple sclerosis, anaemia, asthma, autoimmune/inflammatory disorders (e.g. AIDS, allergies, anaemia, asthma, contact dermatitis and diabetes mellitus), and reproductive disorders (e.g. infertility, endometriosis and uterine fibroid). The present amino acid sequence represents a human CGDD-associated protein of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention comprises the amino acid and coding sequences of human proteins that are associated with cell growth, differentiation, and de (CGDD). The DNA and protein sequences of the invention are useful for diagnosing, treating or preventing disorders associated with aberrant expression of CGDD, such as: cell proliferative disorders (e.g. arteriosclerosis, atherosclerosis, bursitis, cirrhosis, hepatitis, polycythaemia vera, psoriasis and cancers), developmental disorders (e.g. polycythaemia vera, psoriasis and cancers), developmental disorders (e.g. epilepsy, stroke, Alzheimer's disease, Pick's disease, Huntington's situation, and the procession of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the province of the provin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SAPHO syndrome; synovitis; acne; pustulosis; hypertosis; osteomyelitis; uveitis; endophthalmitis; bone; joint; central nervous system; ELISA; inflammatory lesion; acne vulgaris; enzyme linked immunosorbent assay;

The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA). Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     cc encoding a Propionibacterium acnes protein. The invention also relates to complypeptides encoded by the polypucleotides (ABM35624-ABM64356) and to complypeptides encoded by the polypucleotides. The invention companies fragments of P. acnes polypeptides. The invention comprising a polypeptides. The invention fusion proteins comprising a polypeptide of the invention; a method for stimulating an immune response specific for a P. acnes complypeptide and an isolated T cell population comprising T cells prepared comproperation (comprising P. acnes polypeptides, antibodies, antibodies, fusion proteins, T cell populations, or compatient; and a method for inhibiting the presence or absence of P. acnes in a compatient; and a method for inhibiting the development of P. acnes in a compatient. The P. acnes polypeptides, polypucleotides, antibodies, fusion proteins, T cell populations or antigen-presenting cells that express the polypeptides, antibodies, fusion proteins. The polypuclations or antigen-presenting or treating acne collapsetides are useful for diagnosing, preventing or treating acne collapsetides are useful for diagnosing, preventing or treating acne collapsetides can also be used as probes or primers for collapsetides can also be used as probes or primers for compatient of primers for the sequence represents a polypeptide predicted to be encoded by an ORF (open creating frame) contained within the P. acnes polynucleotides of the printed specification, but was obtained in electronic format directly content of the printed directly bubly bublished bet sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     US-10-030-271-3 (1-1883) x ABM37948
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Zhang

CC P. acnes is also involved in infections of bone, joints and the central CC nervous system, however it is particularly involved in the inflammatory CC lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a cc sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The CC polypeptides may be used as antigens in the production of antibodies conspective for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and CC therefore treat P. acnes infections. The antibodies may also be used as CC diagnostic agents for determining P. acnes presence, for example, by cenzyme linked immunosorbent assay (BLISA). Note: The sequence data for this patent did not form part of the printed specification, but was CC cobtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    polypeptides. The proteins and their associated DNA sequences are the treatment, prevention and diagnosis of medical conditions care.

P. acnes. The disorders include SAPHO syndrome (synovitis, acne.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Propionibacterium acnes vaccinating against and treating acne vulgaris.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     21-APR-2000; 2000US-0199047P

                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to an isolated polynucleotide (ACF64435-ACF64733) CC encoding a Propionibacterium acnes protein. The invention also relates to CC polypeptides encoded by the polynucleotides (ABM35624-ABM64536) and to CC immunogenic fragments of P. acnes polypeptides. The invention and the invention and the invention and the invention and the invention and the invention and the invention; antibodies against polypeptides of the invention; a comprising a polypeptide of the invention; a method for stimulating an immune response specific for a P. acnes CC polypeptide and an isolated T cell population comprising T cells prepared CC via this method; a vaccine composition (comprising P. acnes polypeptides, or CC polypucleotides, antibodies, fusion proteins, T cell populations, or CC patient; and a method for inhibiting the presence of P. acnes in a CC patient; and a method for inhibiting the development of P. acnes in a CC patient; and a method for inhibiting the development of P. acnes in a CC patient. The P. acnes polypeptides, polypucleotides, antibodies, cells that express the collegaris, T cell populations or antigen-presenting cells that express the collegaris, or cell populations or antigen-presenting or treating acne collegaris, or cell populations or antigen-presenting cells that express the collegaris, or cell populations or antigen-presenting or treating acne concleic acid hybridisation. The vaccine composition is useful for the collegaris, or for stimulating an immune response specific for a P. acnes for collegaris, the polymucleotides can also be used as probes or primers for concleic acid hybridisation. The vaccine composition is useful for the stimulation of an immune response against P. acnes, or for treating acne, or equinated to be encoded by an ORF (open convention. Note: The sequence data for this patent did not form part of the present of the present of the present of the part of the present of the prese
                                                                                      용
                                                                                                                                                                        US-10-030-271-3 (1-1883) x ABM59468 (1-89)
                                                                                                                                                                                                                                           Query Match:
                                                                                                                                                                                                                                                                 Best Local Similarity:
                                                                                                                                                                                                                                                                                        Percent Similarity:
                                                                                                                                                                                                                                                                                                             Score:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New Propionibacterium acnes polypeptides and polynucleotides encoding the polypeptide, useful for diagnosing, preventing or treating acne vulgaria, or for stimulating an immune response specific for a P. acnes protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Mitcham JL, Skeiky YAW, Persing DH, Zhang Y, Wang S, Jen S, Lodes MJ, Barth B, Vallieve-Douglass J;
